

Gold Door

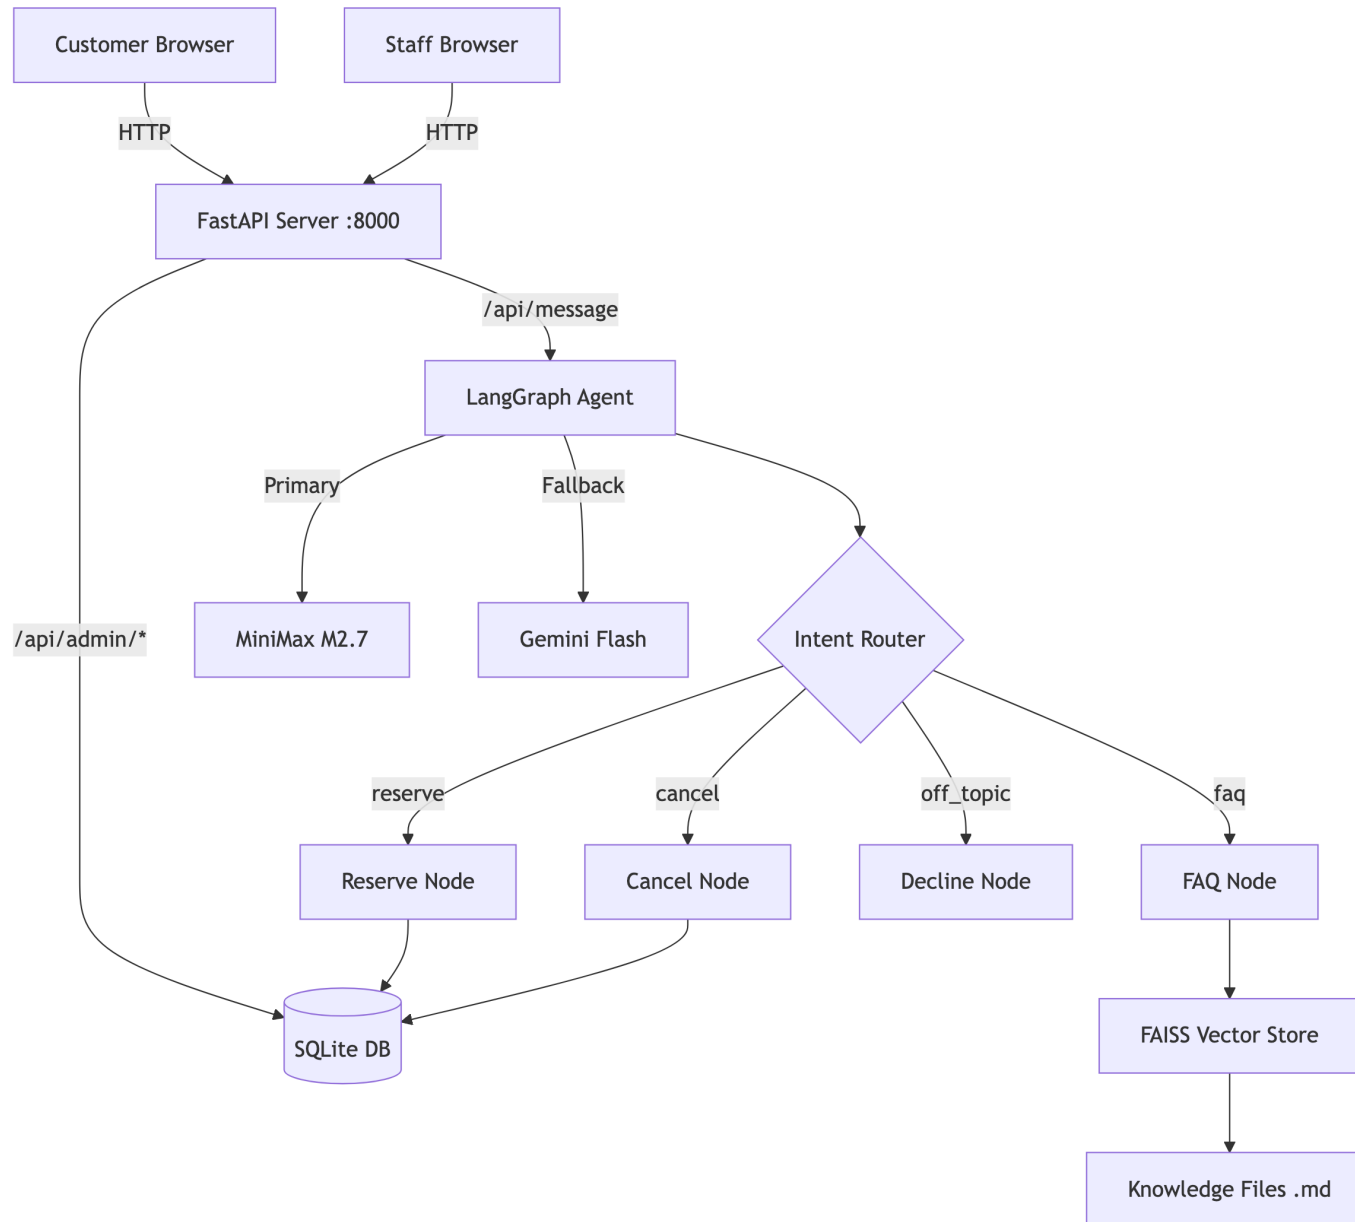

Architecture Diagrams

AI-Powered Restaurant Reservation Agent

ISYS 573 - Agentic AI | University of Arizona | May 2026

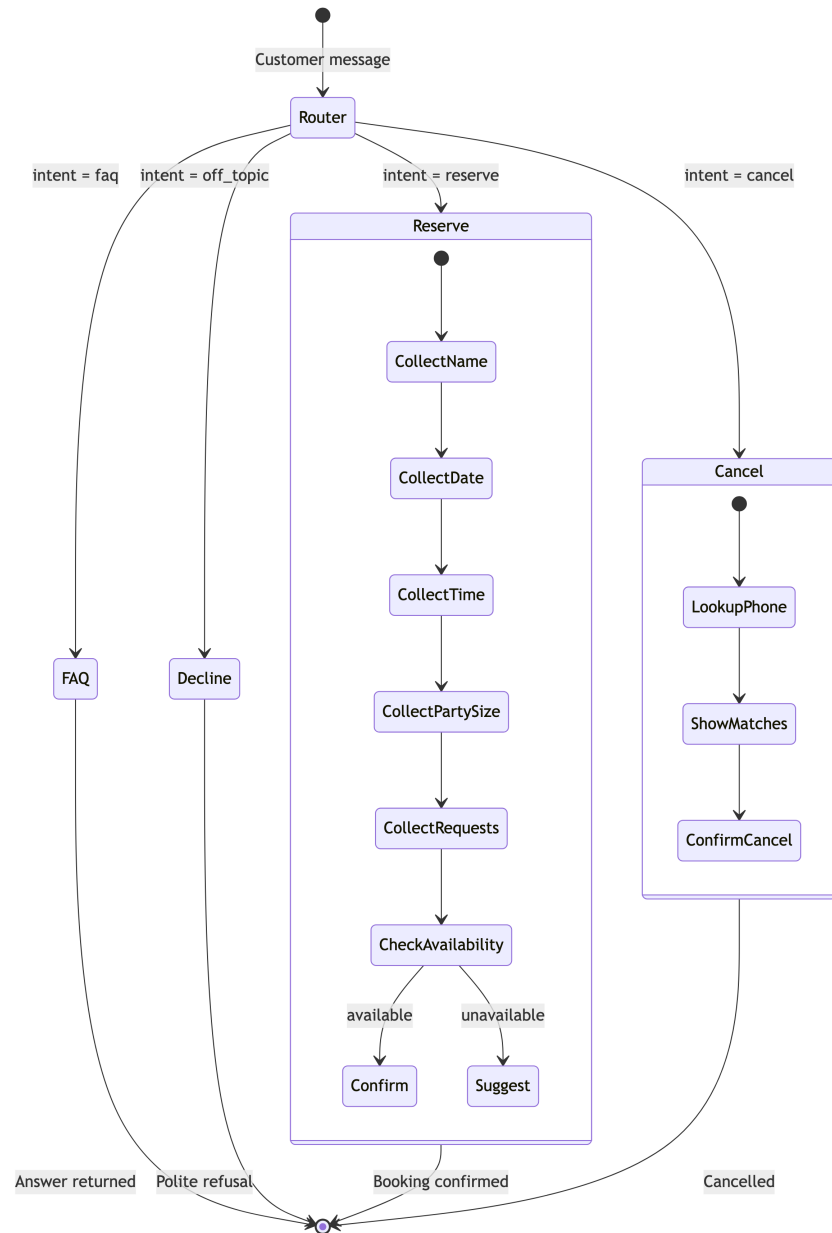

1. System Architecture

How all components connect - from browser to database.

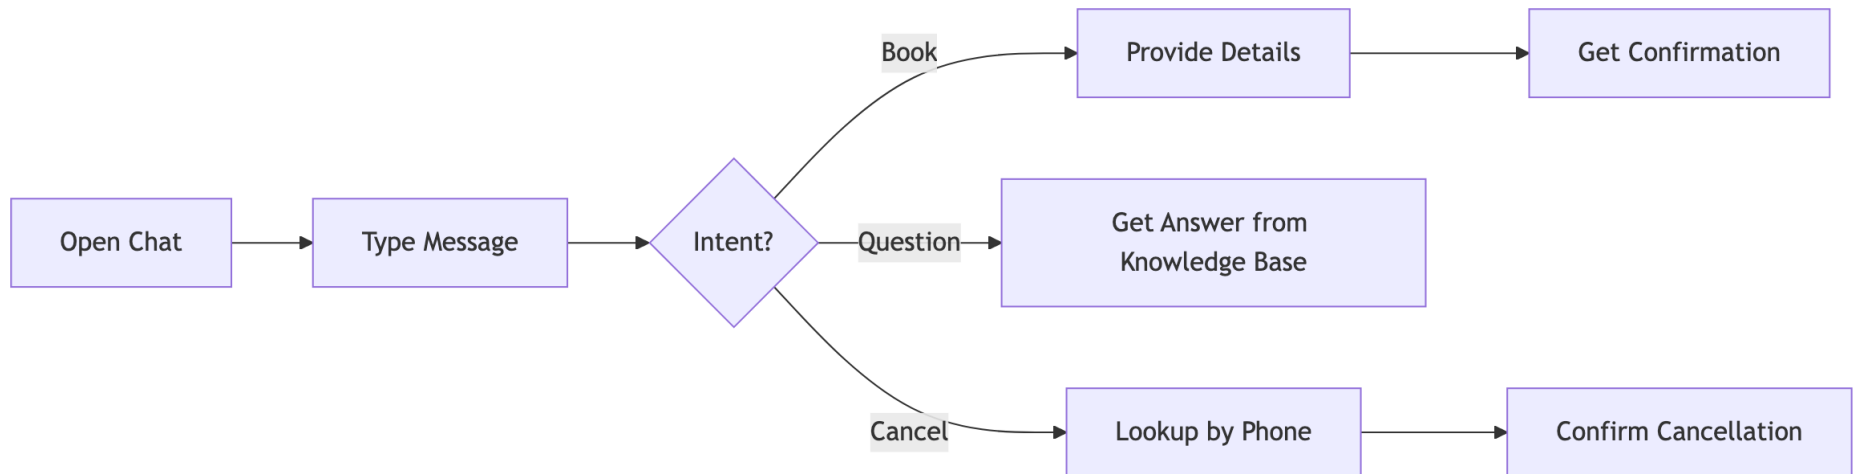

2. Conversation State Machine

How the agent routes and handles multi-turn conversations.

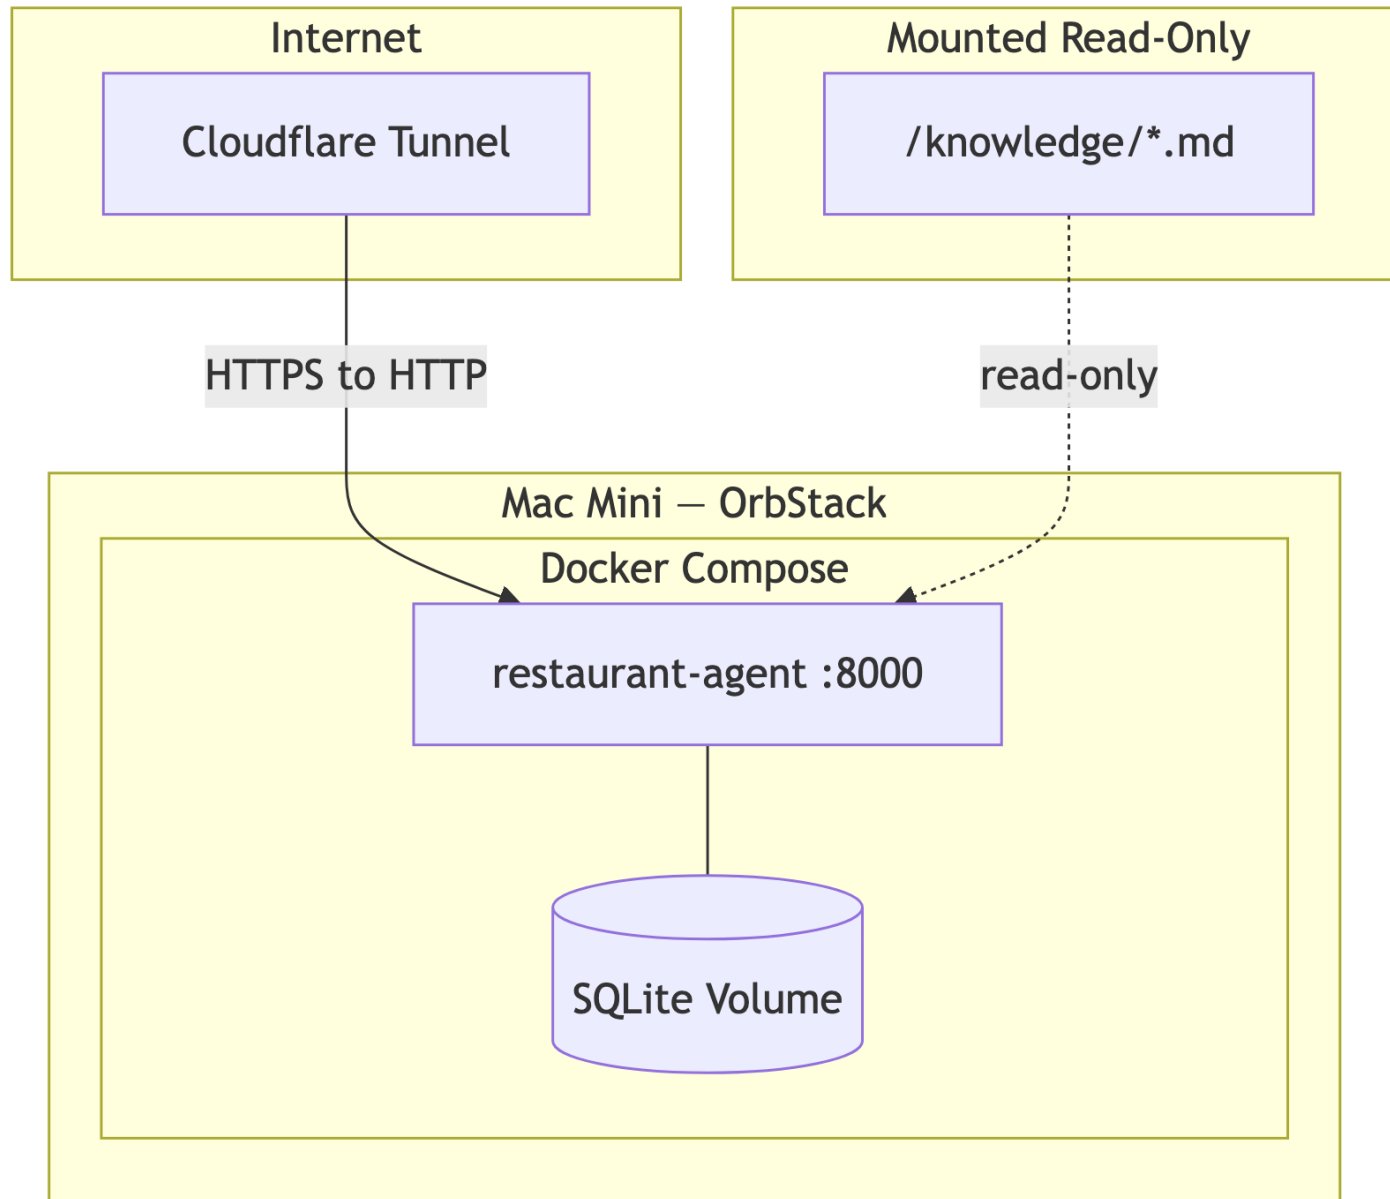

3. Customer Journey

The three main paths a customer can take.

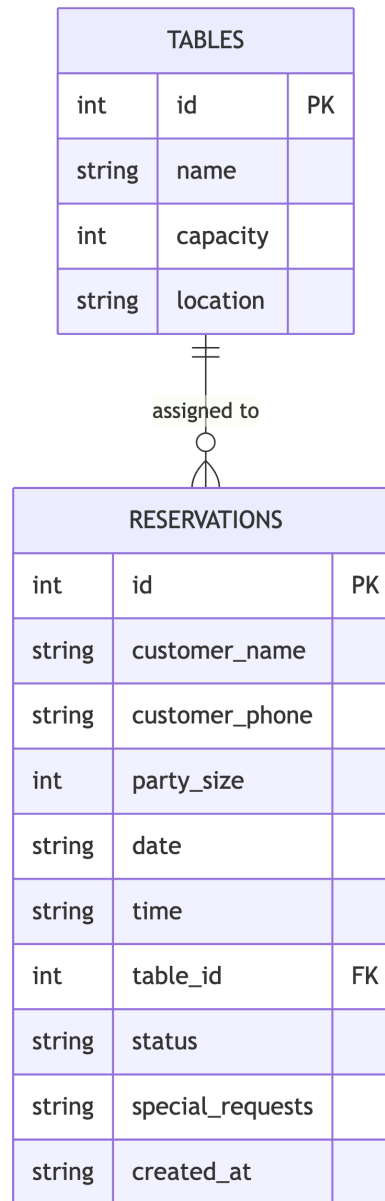

4. Deployment

How Gold Door is hosted and exposed to the internet.

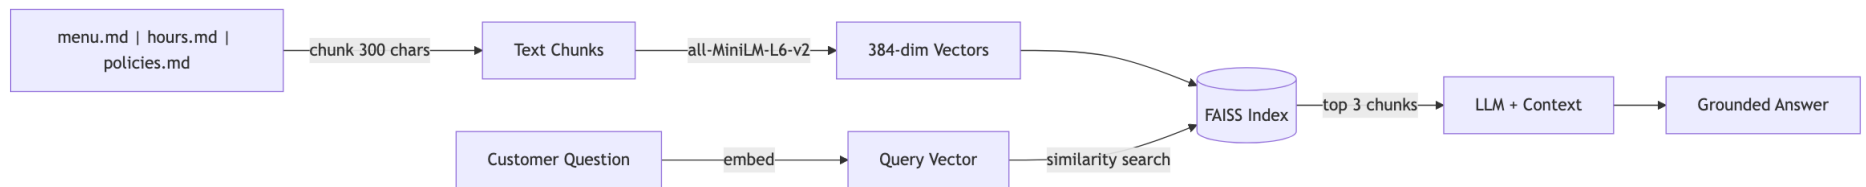

5. Database Schema

SQLite tables - 10 pre-seeded restaurant tables, reservations with status tracking.

6. RAG Pipeline

How customer questions get answered using restaurant knowledge files.

7. Security Layers

Multi-layered defense - every message passes through before reaching the agent.
